

Expanded Industry Leadership

APP's world-class team consists of experienced professionals who analyze unique application needs and develop solutions to match your powder coating requirements. APP takes a project management approach to ensure on time delivery, quality control and cost management.

Yes, We Can!

APP's cutting edge Powder line is a flexible solution for your coating needs. Our short set-up time allows us to keep costs low on both short and long runs, regardless of the shape or size of your product. We maintain accurate delivery schedules insuring you receive finished product when promised!

- We can powder on Plastic, MDF, Fiberglass and all Metals
- We take a Project Management approach to every job
- We implement a cutting edge Quality Control system

Strong, High Quality Finish

Powder Coating is the fastest growing finishing technology in use today. It is applied in its dry powder form directly to the surface of metals to be coated. Each powder particle contains the necessary resin, pigment, modifiers and curing agent to properly coat metal surfaces. The result is a coating that provides a strong, high quality and impressive finish.

An Abundance of Advantages

Powder Coating: a better solution for the environment.

- Powder Coating can produce a much thicker coating than conventional paint without running, chipping or corroding.
- Powder coated finishes are resistant to many chemicals including brake fluids and fuels.
- Powder Coating is environmentally friendly and VOC compliant.

A Superior, Cost Effective Solution

Powder Coating, a cost effective and better solution than conventional paint, significantly increases RESISTANCE to undesirable wear and tear:

- Abrasion resistance
- Chemical resistance
- Chip resistance
- Corrosion resistance
- Impact resistance
- Run resistance
- Ultraviolet resistance
- Weather-effect resistance
